U.S. Application No. 10/722,478 Atty. Docket No. 20435-00144-US

## <u>AMENDMENTS TO THE SPECIFICATION</u>

Please amend paragraph [0035] as indicated.

[0035] An aspect of the present invention provides a thiol compound to react with and crosslink the disclosed urethanes. A preferred thiol is a liquid, miscible with the aerylate oligomers and monomers of the present invention. A preferred thiol has a low molecular weight, preferably a molecular weight less than about 500 AMU and more preferably about 399 AMU. The thiol of the present invention must be at least difunctional in order to effect crosslinking of the pendant acrylate groups. A preferred di-functional mercaptan is ethylene bis(3-mercaptopropionate). Suitable di-functional mercaptans include, but are not limited to, dimethyl bis(3-mercaptopropyl)silane, 1,6-hexanedithiol, 1,10-decanedithiol, and 3,6-Dioxaoctane-1,8-dithiol.
